

## Lesson 59 Page Design

```
<body>  
header  
page  
footer  
</body>
```

The header and footer will be the **same** in all the pages, but the page is different.

You can be creative and put whatever you want on the page as a content.

```
Class Page {  
    Private:  
        string htmlCode, CssCode;  
    Public:  
        void choosePage();  
        {  
            void generateCode();  
        }  
        string getHtml();  
        }  
        string getCss();  
}
```
